

Instructions

Each team member receives a problem to work. The first team member gets an answer sheet. The first person works his/her problem, writes the answer only on the answer sheet, and passes the answer sheet only back to the second person. The second student uses the answer to work his/her problem, writes the answer only on the answer sheet, and passes the answer sheet only back to the third person, etc. After the fourth person gets the fourth answer and writes it down on the answer sheet, he/she takes the answer sheet to the proctor in the hall. The first team to get the correct answers wins.

Team Relay 2006

Part 1: $\triangle DEF$ is a right triangle. Find A, when $A = x + 2$.

Part 2: The line L contains the points $(-3, A)$ and $(1, -3)$. Find B, where B = the slope of the line perpendicular to L.

Part 3: Find C when $(C + B + 1.8)^2 = (5 - C)^2$.

Part 4: If $\tan \theta = \frac{C}{3}$, and $0^\circ < \theta < 90^\circ$, find the exact value of D where $\cos^2 \theta = D$.

Answers: $A = 17$, $B = 1/5$, $C = 3/2$, $D = \frac{4}{5}$
